Pre-insulated Sandwich Panels

Alatassi, an ISO 9001 certified Company, proudly presents its pre-insulated sandwich panels manufactured as per the highest international standards.

Applications:

Since the polyurethane is an excellent thermal and moisture insulation material in addition to being repulsive to bacteria, rodents, and insects, it is used effectively in Chicken Houses, Slaughter Plants, Dairy Plants, Fish Processing , Poultry Plants, Blast and Freezer rooms ; as well as cold rooms for vegetables and fruits.

Sandwich Panel:

It consists of two sheets of galvanized steel, stainless steel, or aluminum with injected Polyurethane between them. Panels are divided into wall panels and ceiling panels:

- Ceiling panels are available with two total thicknesses of 72 mm and 92 mm.
- Wall panels are available with a thickness of 5, 6, 8,10,12,14, and 20 mm.

Technical Specifications of the steel:

The steel is galvanized, covered from the outside with a 5 microns base layer and a 20 microns layer of thermal Polyester powder coated, and wrapped with Polyethylene film for protection.

- Standard color is RAL 9016 (other colors are available on request).
- The inner side of the steel is galvanized and coated with 5 microns of Epoxy layer to make steel and foam stick together.

**Technical Specifications of polyurethane:**

- Density: (40 ± 2) kg/m^3 according to DIN EN 845 which is the optimum density for the highest level of insulation.
- Fire rating :

Class B2 or Class B3 according to DIN 4102 that classify polyurethane as non- combustible and that it's self extinguished automatically as soon as the source of flame is cutout.

- A thickness of 40 mm of polyurethane is equivalent in heat insulation to about 72 mm of polystyrene , 90 mm of glass wool , 178 mm of wood, and 310 mm of concrete blocks.
